Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: NUMBER: US/09/252,991A
TITLE OF INVENTION NUMBER: US/09/252,991A
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR PILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 32743
LENGTH: 718
                                                                                                                                                                                                                                                                GENERAL INFORMATION:

Diagnosing paraneoplastic syndrome e.g. paraneoplastic limbic encephalitis or neoplasm e.g. colon cancer comprising assessing a test sample for the presence or absence of antibodies to a Ma family polypeptide.

Claim 48; Fig 9-10; 27pp; Japanese.

The present invention describes a method for diagnosing a paraneoplastic syndrome or neoplasm. The method comprises assessing a test sample for the presence or absence of antibodies to a Ma family polypeptide (I). The method is used to diagnose a paraneoplastic syndrome especially paraneoplastic limbic encephalitis and/or brainstem encephalitis or neoplasm in an individual. The method diagnoses the neoplasm by assessing antibodies to (I) preferably Mal, which is indicative presence of breast cancer, colon cancer, parotid gland cancer, lung cancer, testicular cancer, germ-cell tumours or Mal, which is indicative of testicular cancer, germ-cell tumours or Mal, which is indicative of testicular cancer, germ-cell tumour, and lung cancer. The present sequence is the MaS protein as given in the present invention

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: oyfostatic; hepatotropic; vulnerary; sequences have activities such as: oyfostatic; hepatotropic; vulnerary; antipeorialic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antimentalic; immunosuppressant; immunostimulant; cardiant; thrombolytic; cagulant; vasotropic; antidabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory; antibacterial; antiviral; antithenmatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegemerative used to treat cancers, proliferative disorders, cardiovascular disease, disorders, osteoarthritis, graft vs host disease, cardiovascular disease, storage, systemic lupus erythematosus, severe combined immunodeficiency corrections and servers of storage, systemic lupus erythematosus, severe combined immunodeficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180

preferentially expressed in human adult and fetal brain tissue useful diagnosis, treatment and analysis of cancer and mental disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention comprises the amino acid and coding sequences of seven human proteins that are preferentially expressed in adult whole brain, foctal whole brain, tonsil and adult hippocampus tissue. The DNA sequences are useful for the analysis of disease-associated single nucleotide polymorphisms and the production of knockout and human disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 model mice. The DNA and protein sequences of the invention are useful for the prevention (vaccine) and treatment of cancer and neurological disorders. The present amino acid sequence represents a human protein of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MPLTLLQDWCRGEHLNTRRCMLILGIPEDCGEDEFBETLQEACRHLGRYRVIGRMFRREE 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes assemblages and computer readable media comprising novel human cDNA sequences and clones derived from human foetal brain, foetal kindey, melanoma, testis and amygdala cDNA libraries. ABA93702 to ABA9376 represent human cDNA sequences from the present invention which encode the proteins given in ABB05662 to ABB0759. The human cDNA sequences and clones can be used in gene therapy. The clones may be used in a variety of applications, for example they may be used in profiling assays, for providing large arrays of human genetic material for implementing large-scale screening strategies and for treating diseases via gene therapy procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240

patients. The Ma2 gene and its transcription and/or translation products may have a causative role in the regional selective neuronal degeneration typically observed in Ab, or may confer a neuroprotective function to the remaining nerve cells. Methods are claimed for diagnosing or prognosticating a neurodegenerative disease, for monitoring the prognosticating a neurodegenerative disease, and for evaluating treatment of a neurodegenerative disease, and for evaluating treatment determining the level and/or activity of a transcription or translation product of an Ma onconeuronal antigen gene, especially Ma2. Also claimed are: a method for treating or preventing AD and related neurodegenerative are a method for treating or preventing AD and related neurodegenerative
                                                                                                                                                                          disorders using the Ma2 gene of its transcription or translation product; a method of screening for modulating agents of neurodegenerative diseases; and a recombinant non-human animal comprising an Ma2 gene sequence, which is useful for screening, testing and validating candidate diagnostic and therapeutic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          VFGPVESHKIAQVKLCKAYQEAGEKVSSFVLRLEPLLQRAVENNVVSRRNVNQTRLKRVL 298

MEMAP) given in AAP94695 to AAB74731. MEMAPS have cytostatic,

mitinflammatory, anticonvolasant, immunosuppressive, antidiarrheic and
antinflammatory, anticonvolasant, immunosuppressive, antidiarrheic and
antinflammatory, anticonvolasant, immunosuppressive, antidiarrheic and
antinflammatory, anticonvolasant, immunosuppressive, antidiarrheic and
antidiare care cativities, which can be used in gene therapy.

MEMAPs and agonist of MEMAPs can be used to treat a disease or condition
of MEMAP are used to treat a disease or condition associated with
overexpression of functional MEMAP. These disorders include cell
overexpression of functional MEMAP. These disorders include cell
disorders. The MEMAP polynucleotides and proteins are also used for the
disorders of these disorders. Specific examples of these disorders
disponsis of these disorders. Specific examples of these disorders
include cancer, inflammation, atherosclerosis, epilepsy and diarrhoea.
MEMAP proteins can be used to screen for compounds which specifically
bind MEMAP polynucleotides can be used to prepare transgenic
animals which can be studied to provide information concerning human
disease. Anti-MEMAP antibodies are useful in immunoassays for the
detection of MEMAP protein and can be used as antagonists to treat or
prevent a disorder associated with MEMAP. Polynucleotides encoding MEMAP
can be delivered to target cells with genetic abnormalities with respect Isolated polypeptide with a human membrane associated protein sequence is useful for the diagnosis, prevention and treatment of cell proliferative, autoimmune/inflammatory, neurological and gastrointestinal disorders. Claim 1; Page 119-120; 173pp; English.

AAD05121-AAD05203 represent cDNAs corresponding to 24 human secreted protein genes, and AAE01232-AAE01311 represent the proteins they encode. protein genes, and AAE01232-AAE01311 represent the proteins they encode. CAAE01312-AAE013140 represent human secreted proteins to created proteins and their genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. CC rew protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 24 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune cdiseases (e.g., rheumatoid arthritis), inflammation, allergies, contrological disorders, schizophrenia, asthma, skin disorders, contrological disorders, atherosclerosis, cardiovascular disorders, angiogenic disorders, tidney disorders, gastrointestinal disorders, proping of disorders, indicated disorders, atherosclerosis, cardiovascular disorders, proping proteins can also be used to aid wound healing and epithelial cell confortering to proteins can also be used to aid wound healing and epithelial cell confortering in chemotaxis, and can be used as a food additive or proteins to percein stin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to identify their cognate ligands or binding conforms, and can be used as a food additive or protein of the invention can be used as a food additive or protein of the invention can be used in alleviating symptoms associated conforted in the disorders manning above, and in displanced in mileral conformation of the invention can be used an alleviating symptoms associated conformation of the invention of the invention of the inv New isolated nucleic acid molecule encoding a human secreted protein used in preventing, treating or ameliorating a medical condition. radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein fragment referred to

```
mentiarteriosclerotic activities, which can be used in gene therapy.

MEMAPS and agonist of MEMAPS can be used to treat a disease or condition
associated with decreased expression of functional MEMAP and antagonists
of MEMAP are used to treat a disease or condition associated with
configurative, autoimmune/inflammatory, neurological and gastrointestinal
disorders. The MEMAP polynucleotides and proteins are also used for the
disorders. The MEMAP polynucleotides and proteins are also used for the
disorders. The MEMAP polynucleotides and proteins are also used for the
disorders are included cancer, inflammation, atherosclerosis, epilepsy and diarrhoea.
MEMAP proteins can be used to screen for compounds which specifically
bind MEMAP including antibodies, oligonucleotides, proteins and small
molecules. MEMAP polyuncleotides can be used to prepare transgenic
disease. Anti-MEMAP antibodies are useful in immunoassays for the
disease. Anti-MEMAP antibodies are useful in immunoassays for the
detection of MEMAP protein and can be used as antagonists to treat or
prevent a disorder associated with MEMAP. Polyuncleotides encoding MEMAP
can be delivered to target cells with genetic abnormalities with respect
mention and the expression of MEMAP to treat or prevent a disorder associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cerebroprotective; antiparkinsonian; hypotensive; antiasthmatic; antidiabetic; antipscriatic, antiinflammatory; immunosuppressive; antidatherosclerotic; dermatological; cancer; neurological disorder; parkinson's disease; diabetes mellitus; asthma; enamel defect; immune disorder; autoimmune disease; respiratory disorder; bone disorder; eastoutest, leukaemia; lymphoma; cell growth regulation disorder; lesional psoriatic skin; atherosclerosis; abdominal aortic aneurysm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 NAQAILLELAQDIDYALLPREIPGKGGPWEVIVKPRNSDGEFLNRLNRFLEEERRTVSDM 120

                                                                                                                                                                                  The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA546711). The coding sequences are useful in the gene therapy of diseases caused by abormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

                                                                                                                                                          ò
                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to isolated NOVX (NOVX1-11) polypeptides and the polynucleotides that encode them. NOVX polypeptides, polynucleotides and anti-NOVX antibodies are useful for treating or preventing a pathology associated with NOVX polypeptide in humans and for treating a syndrome cassociated with human disease e.g. disorders characterised by altered associated with human disease e.g. disorders, angiogenesis and cell morility, proliferation and migration e.g. cancer, angiogenesis and wound healing (NOV1-3), neurological disorders, e.g. episodic ataxia, autosomal dominant myokymia, stroke, Parkinson's disease, Alzheimer's disease, non-insulin dependent diabetes mellitus, asthma, hypertension and seizure (NOV4), enamel defects, including hypoplasia and disorders involving enamel defects, including hypoplasia and disorders involving enamel defects, including hypoplasia and thypomineralisation (NOV5-7), paraneoplastic neurological disorders, e.g. paraneoplastic limbic of brain-stem encephalitis occurring during testicular cancer, diabetes, reproductive health, metabolic and endocrine disorders, gastrointestinal disorders, immune disorders and autoimmune contessor respiratory disorders, bone disorders musculoskeletal disorders, musculoskeletal correct cancer, dispersal disorders, musculoskeletal correct cancer, and serial disorders (NOV9), lesional psoriatic skin (NOV9-10) and atherosclerosis, abdominal corrects and uncological disorders musculoskeletal correct for interament of a NOVX related pathology. The antipodies and a call correction and encological disorders pathology. The antipodies and a coll correct correction and pathological state in amammal. The present sequence for treating a pathological state in a mammal antigen-like protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 NRKVALVGLTAETSHALVPKEIPGKGGIWRVIFKPPDPDNTFLSRINBFLAGEGMTVGEL 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to human polynucleotides and the polypeptides they encode. The polynucleotides and polypeptides are useful in diagnostics, encemplay, medical imaging, identification of mutations responsible for genetic disorders or other traits, assessing biodiversity and producing many other types of data and products dependent on DNA and amino acid sequences. They are also useful for preventing, treating or ameliorating medical conditions, such as cancer, neurodegenerative disorders (e.g. Parkinson's disease, Alzheimer's disease), lymphoid cell disorders, osteoporosis, osteoarthritis, bone degenerative disorders, periodontal disease, liver fibrosis, infections (e.g. viral, fungal or

The present invention describes a method for diagnosing a paraneoplastic syndrome or neoplasm. The method comprises assessing a test sample for the presence or absence of antibodies to a Ma family polypeptide (I). The method is used to diagnose a paraneoplastic syndrome especially paraneoplastic limbic encephalitis and/or brainstem encephalitis or antibodies to (I) preferably Mal, which is indicative presence of breast cancer, colon cancer, parotid gland cancer, lung cancer, testicular cancer, garm-cell tumours or Mal, which is indicative of testicular cancer, garm-cell tumours or Mal, which is indicative of testicular cancer, garm-cell tumour, and lung cancer. The present sequence is the Mal protein as given in the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a method for diagnosing a paraneoplastic syndrome or neoplasm. The method comprises assessing a test sample for the presence or absence of antibodies to a Ma family polypeptide (1). The method is used to diagnose a paraneoplastic syndrome especially paraneoplastic limbic encephalitis and/or brainstem encephalitis or neoplasm in an individual. The method diagnoses the neoplasm by assessing antibodies to (1) preferably Mal, which is indicative presence of breat cancer, colon cancer, parotid gland cancer, lung cancer, testicular cancer, germ-cell tumours or Mal, which is indicative of testicular cancer, germ-cell tumours or Mal, which is indicative of testicular cancer, germ-cell tumour, and lung cancer. The present sequence is the Ma4 protein as given in the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 LAHLLGQAMAHAPQPLL-PMRYRKLRVFSGSAVPAPEEDSFEVWLEQATEIVKEWPVTEA 119

AAD05121-AAD05203 represent cDNAs corresponding to 24 human secreted protein genes, and AAE01232-AAE0131 represent the proteins they encode.

CC protein genes, and AAE01232-AAE0131 represent the proteins they encode.

CC AAR01312-AAE0131 represent human secreted protein variants or regaments.

CC The secreted proteins and their genes are useful for preventing, treating or ameliorating medical conditions. e.g., by protein or gene therapy.

CC Pathological conditions can be diagnosed by determining the amount of the new genes. Specific uses are described for each of the 24 genes, the new genes. Specific uses are described for each of the 24 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumanatoid arthritis), inflammation, allergies,

CC diseases (e.g., Alzheimer's disease, Parkinson's disease), cognitive disorders, schizophrenia, asthma, skin disorders (e.g., angiogenic disorders, tidhey disorders, and infections. The preparancy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell

C proteins can also be used to aid wound healing and epithelial cell

C proliferation, to prevent skin aging due to sunburn, to maintain organs chore transplantation, for supporting cell culture of primary tissues, correspondent tissues, to identify their cognate ligands or binding
                                                                                                        Human; secreted protein; proliferative disorder; cancer; tumour; foetal abnormality; developmental abnormality; haematopoietic disorder; findimune system disorder; AIS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer's disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovescular disorder; anglogenic disorder; kidney disorder; gastrointestinal disorder; prepanancy-related disorder; endocrine disorder; infection; wound healing; vulnerary; cell culture; chemotaxis; food additive; gene therapy; binding partner identification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           used in preventing, treating or ameliorating a medical condition
Human gene 22 encoded secreted protein fragment, SEQ ID NO:201.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid molecule encoding a human secreted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ž

partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein fragment referred to in the disclosure of the invention
                                                                                                                                                                                                                                                                               70 AQDIDYALLPREIPGKGGPWEVIVKPRNSDGEFLNRLNRFLEEERRTVSDMNRVLGSDTN 129

                                                                                                                                                                                                                                                                                                                                                                                       -!- TISSUE SPECIFICITY: Testis and brain specific. In some patients suffering from cancers, it is also specifically expressed by the parameoplastic tumor cells.
-!- MISCELLANEOUS: Antibodies against PNWA1 are present in sera from patients suffering of parameoplastic neurological disorders.
-!- SIMILARITY: Belongs to the PNWA family.

Biol. Chem. 276:2802-2807(2001).
                DOMAIN: The BH3-like domain is required for association with BAX and for mediating apoptosis. The three BH domains (BH1, BH2, and BH3) of BAX are all required for mediating protein-protein interaction (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  10; Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1 DLMHIVQADNPSISVEECLEAFKQVFGSLESRRTAQVRYLKPYQEEGEKVSAYVLRLETL
and mouse cDNA sequences.",

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-!- FUNCTION: Mediates caspase-dependent apoptosis.

-!- SUBGNIT: Homodimer. Binds BAX, BCL2 and BCLX (By similarity).

-!- DOMAIN: The BH3-like domain is required for association with BAX and for mediating apoptosis. The three BH domains (BHI, BH2, and BH3) of BAX are all required for mediating protein-protein interaction (By similarity).

-!- SIMILARITY: Belongs to the PNMA family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NFL BOVIN STANDARD; PRT; 554 AA.

Biol. Chem. 268:16679-16687(1993).
-!- FUNCTION: Neurofilaments usually contain three intermediate filament proteins: L, M, and H which are involved in the maintenance of neuronal caliber.
-!- DOMAIN: THE EXTRA MASS AND HIGH CHARGE DENSITY THAT DISTINGUISH THE NEUROFILAMENT PROTEINS FROM ALL OTHER INTERMEDIATE FILAMENT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SEQUENCE OF 197-483 FROM N.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Isoid=015742-3; Sequence=VSP 003387;
-:- TISSUE SPECIFICITY: Widely expressed at low levels. Highly expressed in melanoma cell lines.
-:- INDUCTION: By serum and PMA stimulation.
-:- DOMAIN: The NAB conserved domain 1 (NCD1) interacts with EGR1 inhibitory domain and mediates multimerization.
-:- DOMAIN: The NAB conserved domain 2 (NCD2) is necessary for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NECESSARY FOR NUCLEAR LOCALIZATION (BY SIMILARITY).
